'Global Research Conference, Singapore'

# Global Research Artificial Intelligence Overview

December 23, 2024, Singapore

Presented by: **Rustam B. Rustamov**

The screenshot shows a Google Meet interface with the following elements:

- Browser Tabs:** Includes tabs for 'Inbox (2) - support@metastay...', 'N/A - Calendar - Week of Dec...', 'Meet - Global Research Co...', and 'PPT - Google Drive'.
- Address Bar:** Displays the URL 'meet.google.com/yoc-lycd-rht?authuser=2'.
- Participant Grid:** A 2x5 grid of video thumbnails. The top row includes Dr. Muhtasibat, Khar (name partially visible), Rustam Rustamov (the presenter), Gulnarg'uliyeva, and Samira Allyeva. The bottom row includes Dr. Muhammad Saifdar Bhatti, Sumia Huseynova, a tile for '11 others', and a 'MetaWay Info' tile.
- Bottom Bar:** Shows the time '2:03 PM | Global Research Conference Singapore' and various meeting controls like mute, video, chat, and end call.

**Innovative Water Management**  
**Techniques for Sustainable Agriculture**

## Recommendations

► To overcome these challenges, the research recommends a multi-dimensional approach:

- Financial Investment: Prioritize funding for infrastructure and affordable technologies.
- Technology Integration: Promote the use of smart, data-driven tools in agricultural practices.
- Policy Support: Develop and enforce policies to facilitate sustainable water use.
- Stakeholder Collaboration: Strengthen partnerships among farmers, researchers, and policymakers for knowledge sharing and collective action.

► By implementing these strategies, agricultural communities can enhance water efficiency, build resilience to climate change, and ensure sustainable resource use. The findings and recommendations provide a robust framework for global efforts toward sustainable agricultural water management.

# Introduction and Background

Sustainable agriculture is essential for feeding a growing population while conserving resources.

Agriculture accounts for 70% of freshwater use, but traditional methods like flood irrigation are inefficient, worsening water scarcity amid climate change.

Key challenges include outdated infrastructure, inefficient water use, and unpredictable rainfall.

Technological solutions, such as Internet of Things (IoT), remote sensing, and machine learning, enable efficient irrigation and real-time monitoring, improving yields and resilience

# Global Research Singapore Conference

## SDG 6: Clean Water and Sanitation

Marina Kharitonashvili

### Access to Clean Water

Georgia has made substantial advancements in providing access to clean drinking water, particularly in urban areas. According to official data:

Approximately 99% of the urban population has access to safely managed drinking water services.

In rural areas, the situation is more challenging, with only around 67–75% having access to safely managed water.

The disparity between urban and rural areas highlights infrastructure gaps, as rural communities often rely on outdated water supply systems, wells, or natural springs, which may not meet safety standards.

# Data-based School Management

- ❖ Thank you everyone for having me here with you.
- ❖ My heartfelt gratitude to the whole team of this organization for arranging such a splendid Global Research Conference.

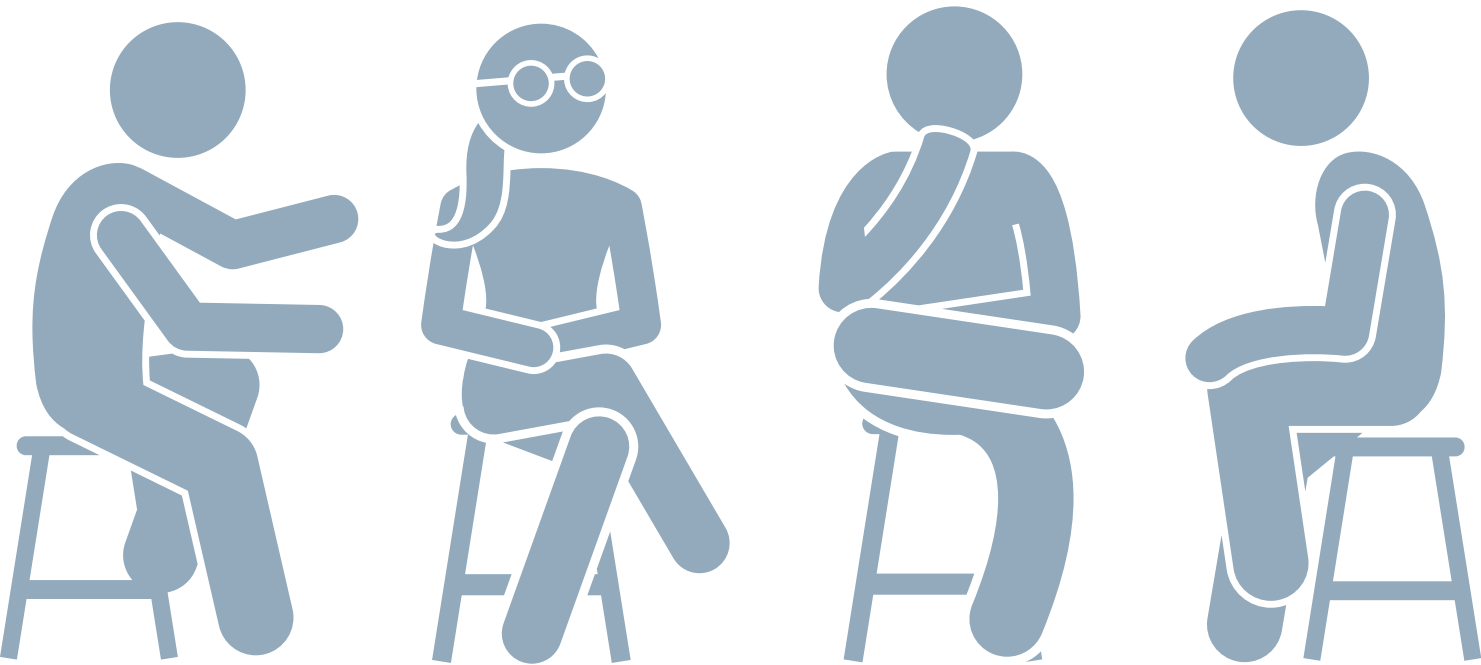

## What does the School Management System Include

- Maintenance and reporting of student data, including family, demographics and other records
- Processing inquiries from prospective students
- Manage the admission or registration processes
- Enrolling new students and activation of online scheduling
- Managing extracurricular activities and/or related services
- Monitoring & Registering of notes, remarks, incidents and actions (Educational CRM)
- Managing internal documents and workflows
